

NEW

PRO*type*

PROCESSOR

- **The new ProType Automatic Processor completely develops and fixes 8-1/2" paper or film exposed on the ProType Typesetting System. Chemicals, which are stored within the unit, completely process the paper or film within seconds.**
- **The ProType Processor can be used in room light alongside the ProType Typesetting unit. This allows you to set type and process the job completely without the delay of manual developing.**
- **The ProType machine and the processor make a team that will give you high quality copy—quick—ready for use.**

Now at last, Photo Circle can put your type into perfect circles without time consuming messy paste-ups.

Photo Circle attaches to your camera copy board in seconds with powerful suction cups.

Any camera can be used, vertical or horizontal.

The size circle you can make is limited only by the size film your camera can take. With camera focused at same size, a circle 3" to 5" diameter can be formed. Other sizes are obtained by setting camera for enlargement or reduction.

Photographic negatives or positives, paper or film can be mounted on Photo Circle. Type proofs on paper, Relyon and Scotch Print also make excellent copy for Photo Circle.

Any straight line copy, art, border designs, etc. can be put into a circle. Its use is limited to the imagination of the user.

The Photo Circle is a tool that can be used by any one who prepares art work or copy for any use.
